5 Things CFOs & Controllers Love About Invoice-to-Pay Automation

1

Working Capital Optimization
Automated invoice-to-pay solutions put real-time decision-making into a CFO's or controller's hands like nothing else. Graphical dashboards provide instant visibility into invoices and payments.

2

Control Over Corporate Spend
The graphical dashboards and rich reporting built into automated invoice-to-pay solutions provide the real-time insights into corporate spending that CFOs and controllers require.

3

Early Payment Discounts
An automated invoice-to-pay solution enables buyers to approve invoices within early payment discount windows, heading-off potential supply chain disruptions, and reducing an organization's total cost of goods and services purchased.

4

Cash-Back Rebates
Paying suppliers with virtual cards enables businesses to earn cash-back rebates. Cash-back rebates can be used to offset the operational costs of an accounts payable department or to fund automation projects.

5

Longer DPO
Paying suppliers with certain virtual card programs enables buyers to instantly extend their Days Payable Outstanding (DPO), without changing their payment terms, freeing up cash to support various company growth initiatives.
